

GRASSLAND REGENERATIVE FARMING CONSULTANCY SERVICE

Livestock farmers, particularly in the beef and sheep sector, are significantly exposed to the impact of reducing subsidy payments which have recently been compounded by significant input price volatility.

While red meat prices have fared reasonably well over the last few years, the market alone cannot be relied upon to maintain profits which historically were heavily influenced by the Basic Payment Scheme.

Our Farm Business Consultancy team possess both practical and technical insight into grassland management and livestock strategies that bring efficiency gains to livestock businesses.

SUMMARY OF SERVICE

If you are successfully referred to the Grassland Regenerative Farming service following the initial on-farm business review, this is offered as a half day consultancy session that includes:

A visit to discuss grassland management principles, coupled with a brief farm walk to assess an example of existing infrastructure and opportunities to implement new grassland management techniques.

ADDITIONAL SERVICES

The following services are not covered by the FBAS scheme, but can be provided on a time charge basis:

- Full farm walk to review all infrastructure and create a practical design of your bespoke future grazing system and a personalised action plan to implement your new grassland management strategy.
- Review current livestock enterprise gross margins alongside a forage-based system to quantify potential productivity benefits against infrastructure costs.
- Identify Key Performance Indicators to help re-focus livestock strategy.
- Create and monitor a feed budget focussed around pasture plants and making the most of pasture-based nutrition.
- In-depth review of infrastructure options, system design and rotational grazing system principles.

Any additional work will be agreed with you prior to any work being undertaken.
